BERITA ACARA

Ujian Mempertahankan Skripsi Sarjana Bagi Mahasiswa Program Strata 1
Fakultas Keguruan dan Ilmu Pendidikan Universitas Muhammadiyah Sumatera Utara

بِسْمِ اللّٰهِ الرَّحْمٰنِ الرَّحِیْمِ

Panitia Ujian Sarjana Strata-1 Fakultas Keguruan dan Ilmu Pendidikan dalam Sidangnya yang diselenggarakan pada hari Senin, Tanggal 04 September 2023, pada pukul 09.00 WIB sampai dengan selesai. Setelah mendengar, memperhatikan dan memutuskan bahwa:

Nama Lengkap : Bunga Pooja Alfira Saragih
N.P.M : 1802050045
Program Studi : Pendidikan Bahasa Inggris
Judul Proposal : The Analysis of Lexical Density and Readability on Joe Biden's Update Toward Ukraine-Russia Conflict.

Dengan diterimanya skripsi ini, sudah lulus dari ujian Komprehensif, berhak memakai gelar Sarjana Pendidikan (S.Pd).

Ditetapkan : (A) Lulus Yudisium
() Lulus Bersyarat
() Memperbaiki Skripsi
() Tidak Lulus

Ketua

Dra. Hj. Syamsuurnita, M.Pd.

PERNYATAAN KEASLIAN SKRIPSI

بِسْمِ اللّٰهِ الرَّحْمٰنِ الرَّحِیْمِ

Saya yang bertandatangan dibawah ini :

Nama : Bunga Pooja Alfira Saragih
NPM : 1802050045
Program Studi : Pendidikan Bahasa Inggris
Judul Skripsi : The Analysis of Lexical Density and Readability on Joe Biden's Update toward Ukraine-Russia Conflict

Dengan ini saya menyatakan bahwa skripsi saya yang berjudul "The Analysis of Lexical Density and Readability on Joe Biden's Update toward Ukraine-Russia Conflict." adalah bersifat asli (Original), bukan hasil menyadur mutlak dari karya orang lain. Bilamana dikemudian hari ditemukan ketidaksesuaian dengan pernyataan ini maka saya bersedia dituntut dan diproses sesuai dengan ketentuan yang berlaku di Universitas Muhammadiyah Sumatera Utara.

Demikian pernyataan ini dengan sesungguhnya dan dengan yang sebenarnya.

Medan, Agustus 2023

Hormat saya

Yang membuat pernyataan,

Bunga Pooja Alfira Saragih

ABSTRACT

Bunga Pooja Alfira Saragih. 1802050045. The Analysis of Lexical Density and Readability on Joe Biden's Update Toward Ukraine-Russia Conflict. Skripsi. English Education Department. Faculty of Teacher Training and Education. Universitas Muhammadiyah Sumatera Utara. 2023.

This study aims to analyze the use of lexical density and readability of Joe Biden update Ukraine-Russia conflict. This study uses a qualitative research method design. The object of this research is transcript of Joe Biden's speech. Get Joe Biden's speech on the Ukraine-Russia conflict from CNBC's official YouTube channel at: <https://www.youtube.com/watch?v=XPrq5GjnFcQ&feature=shares>. This study uses the theory of Halliday (1985). This research found there were 401 said content. After being calculated using Ure theory (1971), this text has a lexical density of 33.93% and is included in high lexical density category. Then there are 70 sentences, 1.182 words, 2.526 syllables and the readability result is 9,503 which means it is very difficult.

Keywords: Joe Biden Speech, LexicalDensity, Readability, Ukraine-Russia

Conflict.

ACKNOWLEDGEMENT

Assalamu'alaikum Warahmatullahi Wabarakatuh

In the name of Allah Subhanahuwata'ala, the most excellent lord, the most merciful and beneficent, the researcher can finally finish this research titled " The Analysis of Lexical Density and Readability on Joe Biden's Update Toward Ukraine-Russia Conflict, "peace be upon the prophet Muhammad Sallallahu'alaihiwassalam. The latter has brought human beings from the darkness into the brightness era, and we hope for his blessing on judgment day. And also, the author's parents, Mahyudin Saragih and her beloved mother, Huzaimah, who have helped the writer in any way, have always supported and been the reason for the writer to finish this research.

In addition, many other parties have been involved in completing this research. Therefore the researcher would like to thank:

1. Prof. Dr. Agussani., M.AP., the Rector of University of Muhammadiyah Sumatera Utara.
2. Dra.Hj. Syamsuyurnita, M.Pd., the Dean of Faculty of Teacher Training and Education, University of Muhammadiyah Sumatera Utara
3. Mr. Pirman Ginting, S.Pd.,M.Hum, the head of the English Education

Program, and Rita Harisma. S.Pd. M.Hum as the secretary of the English Education Program of FKIP UMSU for the administrative service.

4. Adib Jasni Kharisma, S.Pd., M.Hum., as the researcher's supervisor, has guided and provided advice and input for researchers during the research.
5. All the English Education Program lecturers have given their valuable thought to teaching English as a foreign language at FKIP UMSU.
6. Aulia Hermi Putri, S.Pd, Sherly Maiyora, S.Pd, Arisa Oktari, S.Pd, Glory Eksanti Algea, S.Pd, as the beloved friend of the researcher who is not always there but will definitely be there any time researchers need and always comfort and support researchers even with the insults they give.
7. All her beloved friends in Class VIII A Morning 2018-2022 have shared many stories in our class.

Finally, the researcher hopes this research will be helpful from the academic perspective or others. The researcher also fully realized that this research is far from perfect, and thus any positive criticism is acceptable for the improvement of this research in the future.

Wassalamualaikum Warahamatullahi Wabarakatuh.

Medan, Agustus 2023

The Researcher,

Bunga Pooja Alfira Saragih

CHAPTER I

INTRODUCTION

A. Background of the Problem

The Russia's invasion of Ukraine was highlighted nowadays. Frequent issues include the United States' engagement in the NATO security conflict, military and humanitarian support to Ukraine and the application of sanctions on Russia (U.S. Department of State, 2023). Further, the military conflict between Russia and Ukraine undoubtedly has disrupted world politics and economics, posing new challenges to international relations. This very probably have long-term influence on the global economy (Bakrie et al., 2022). Russia's invasion of Ukraine was become a life-changing experience for all countries, including the United States. In other words, this controversy appeared the presence of price inflation in the United States industrial sector. Therefore, the United States, with allies, and other partners throughout the world have unified strong support to Ukraine (Hakim & Sayidin, 2022).

On the other hand, people globally prefer to communicate their thoughts through speech, particularly when it comes to individuals who hold influence over every thing else, such as presidents or other political speakers. They can effectively communicate information through speech, allowing society to understand their message through their words and their intended listeners to understand what they are attempting to convey (Safwat, 2015). Therefore, in response to the Russia's executed, unprovoked, and unjustifiable assault on

Ukraine, Joe Biden as President of the United States, where the United States is an alliance of Ukraine, is encouraged to pursue the phenomenal speech regarding this conflict.

As a result, due to speech is the most effective oral communication tool for conveying ideas, knowledge, and concepts. It is worthwhile to investigate how effective the text is interpreted by the listener in terms of lexical density and readability. Furthermore, in Joe Biden's speech, he addressed the recent occurrence of the Ukraine-Russian conflict. The language employed in the speech clearly describes complex processes. The proportion of lexical items in the text will undoubtedly affect the complexity of each text (Manurung, 2020). Therefore, examining the lexical density and readability of the speech is thus required to determine how easily the speech can be accepted by the recipients (Kwapien, Drozd, & Orczyk, 2010).

Since the complexity of the text ultimately can be determined by lexical density and readability tests, any researchers across the country have performed related studies in recent years. Thus far this decade, just a few studies have been published in this field, including: examining the lexical density and readability of four texts from English textbooks (To, Fan, & Thomas, 2013); investigating the reading sections of English textbooks in Jordan and Sultanate of Oman in terms of their readability and lexical density (Amer & Baarah, 2021); and analyzing lexical density and readability in narrative writings (Nacua & Eslit, 2022). However, lexical density and readability in phenomenal speech have received little attention. Due to the language employed in Joe Biden's speech on the Ukraine-Russian

conflict clearly reveals complicated processes; consequently, assessing the speech's lexical density and readability is essential to establish how readily the speech may be accepted by the recipients. Thus, a greater value is gained if the analysis of lexical density and readability in phenomenal speech is thoroughly investigated in Indonesian studies.

Pertaining to the issue at hand, the researcher is intrigued to conduct a study entitled *The Analysis of Lexical Density and Readability on Joe Biden's Update toward Ukraine-Russia Conflict*. This study was significant since it can assist in determining whether Joe Biden's speech meets the standard criteria for reading indices, and how simple or complicated the content is for the targeted audience's capabilities. This research can also be a reference for further studies on similar issues, along with to provide a broader understanding of grammatical intricacy and lexical density.

B. Identification of the Problem

Considering the previous context, the following issues can be identified as follow:

1. The language employed in Joe Biden's speech towards Ukraine-Russian conflict clearly describes complex processes, examining the lexical density and readability of the speech is thus required to determine how easily the speech can be accepted by the recipients.
2. The value of investigating the lexical density and readability of the phenomenal speech has not yet been widely acknowledged in Indonesian

studies.

C. The Scope and Limitation

The scope of the problem focuses around the lexical density and readability of the speech and is restricted to how the lexical items and readability occurred in Joe Biden's speech towards the Ukraine-Russian conflict which was taken from CNBC Official Youtube Channel.

D. Formulation of the Problem

To deal with the preceding problems, the following research question are proposed as follow:

- a. How many the lexical density found in the transcript of Joe Biden's speech towards the Ukraine-Russia conflict?
- b. How readable does the Joe Biden speech's transcript to the audience?

E. The Objective of the Study

In response to the formulation of the problem, the objective of the study would provided as follow:

- a. To analyze the lexical density of the transcript of Joe Biden's speech towards the Ukraine-Russian conflict.
- b. To determine how readable the Joe Biden speech's transcript is to the audience.

F. The Significance of the Study

The results of this research would be expected to have any importance for particular parties, both theoretically and practically.

Theoretically, this study aims to:

1. Offer information regarding the lexical density and readability of the transcript of Joe Biden's speech towards the Ukraine-Russian conflict.
2. As a valuable reference to further studies which are related to the complexity of texts.

Practically, this study intends to:

1. Strengthen EFL learners' understanding of the lexical density and readability of the text.
2. Contribute to readers' comprehension of Joe Biden's speech on the Ukraine-Russia conflict.

CHAPTER II

REVIEW OF LITERATURE

A. Theoretical Framework

1. Lexical Density

Fundamentally, the proportion of lexical items in the text will undoubtedly affect the complexity of each text (Manurung, 2020). The concept of *lexical density* was originally proposed by Ure in 1971. The lexical density is used in discourse analysis to characterize the percentage of lexical words (content words) to the total number of words in either spoken or written language (Ure, 1971).

Additionally, Johansson (2008) proposed that words with lexical values, include nouns, verbs, adjectives, and some adverbs; are sometimes regarded to as content words. A *noun* is a term that identifies objects and people. The categories are as follows: lady, man, boy, book, desk, chair, and so on. A noun is a member of the part of speech which can serve as the primary word in linguistics. Meanwhile, an *adjective* is a word that describes a noun or pronoun in greater detail. A noun (beautiful, nice, inexpensive) is modified by an adjective, which defines traits (proud, joyful, enthusiastic). The adjective works as a pre-modifier to the head noun in a noun phrase (a brilliant artist) and as the complement of a sentence after an intense verb (the artist is bright). Moreover, *verb* is also known as *the doing word*. Verb as a lexical category that

frequently indicates an act, event, habit, or feeling. In addition, *adverb* is a word that modify a verb, adjective, or other adverbs. All adverbs derived from adjectives. For instance, quickly, brilliantly, gently, cheerfully, and so on (Johansson, 2008).

Moreover, Halliday (1985) defines lexical items as major content words that convey information. Lower density texts are easier to understand, and spoken texts have lower lexical density levels than written ones. This is due to the fact that lexical density reveals the complexity of words inside a text. Furthermore, Halliday (1985) claims that written language has a substantially greater lexical item ratio than spoken language. It indicates that the complexity of spoken language is grammatical, but the complexity of written language or text is lexical.

Lexical density is the measure of the quantity of content information in a sentence or in text. Lexical density also defined as the number of lexical items as a percentage of all words, it may be measured by expressing the number of content carrying words in a text or phrase as a percentage of all words in the text or sentence (Gerot & Wignell, 1995).

Nunan (1993) also pointed out that lexical density is the number of lexical (content words) in a phrase. Content words are considered as any nouns, verbs, adverbs, and adjectives with appropriate and significant lexical meaning. Words with content have a specific meaning. These are the kinds of terms people would look up in a dictionary, such "lamp," "computer," and "drove." The nouns, adjectives, adverbs, and main verbs (those without helping verbs)

are examples of content words. Obviously, the content word differs greatly from function word. Function word was aimed to indicate grammatical relationships rather than a sentence's lexical meaning. Function words include determiners, conjunctions, prepositions, pronouns, auxiliary verbs, modals, qualifiers, and question words. In the other side, the proportion of content words in a sentence or text is measured by lexical density. Furthermore, lexical density is a phrase that is employed in discourse (or text) analysis. It is used to calculate the content-to-grammatical word ratio in any given text (spoken or written). That is, lexical density quantifies the density of information in every section of text based on how densely the lexical items (content words) are packed within the grammatical structure. This is the amount of information offered in a particular piece of writing. Lexical density is a decent indicator of a text's readability (Nunan, 1993).

Later, Halliday (1985) revised Ure's (1971) formulae as his first estimate to quantify lexical density, which marked the evolution of the concept. Grammar items, or function words, were characterized by Halliday (1985) as a close system of determiners such as articles, pronouns, most prepositions, conjunctions, some classes of adverbs, and finite verbs, and lexical items, or content words, as an open system to which new words might be introduced. In contrast to Ure (1971), Halliday (1985) used the term *items* rather than *words* to refer to *lexical density* because Halliday (1985) believed that it may need more than a word to describe a sense.

Here comes the formula of lexical density proposed by Ure (1971):

$$\text{Lexical density (\%)} = \frac{\text{Number of lexical words}}{\text{Total number of words}} \times 100$$

2. Readability

Readability can be referred as the amount of ease or difficulty of the text content may be understood by a certain reader who is reading that text for a certain purpose. Readability entails to the potential that the reader will understand the substance of a text, as opposed to legibility, which is a measure of how readily single letters or characters may be distinguished from one another and how they are presented in the form of a text (Pikulski, 2002).

Readability is also defined by Richardson & Smith (2002) as the ease with which written materials may be read and comprehended. Essentially, readability is concerned with how tough the reader perceives the material to be (Dubay, 2004). It has absolutely nothing to do with readability or literariness. It is frequently mixed up with legibility, which is concerned with typography and layout. It is so prevalent in the research of readability that the level of difficulty is entirely determined by the text (Heydari & Zamanian, 2012).

Readability is concerned with the difficulty of matching a reader to a text. It is an issue of selecting the appropriate reading text for a particular reader. Readers are generally bored when they are offered simple texts that are below their reading ability. Poor readers, on the other hand, will be discouraged if they are forced to read materials that are too tough for them. The readability level of a text has an effect on reading fluency. If the text is above the readers' level, they become frustrated and discouraged from reading it (Marzan, 2022).

The readability formula can provide an estimate of text readability. Attempts to develop readability formulas based on simple correlation give

sufficient information to support the concept. One of the key issues with an excessive empirical approach is that it leads researchers to focus on connections that may or may not exist outside of the texts under consideration. This is not to argue that there may not be more universal underlying processes at work in a certain text. Yet, a review of readability formula reveals a definite tendency to focus on the surface rather than the underlying processes (Bailin & Grafstein, 2016).

Simply put, the readability formula is a process for measuring readability. The readability formula can be asserted as mathematical in nature since it deals with measuring something. This formula may be used to determine the level of difficulty of texts (Ulusoy, 2006).

The Flesch Reading Ease readability formula computes an index score for a text sample depending on the number of words, sentence length, and syllable count. Flesch Reading Ease is a benchmark utilized by several US government entities, including the US Department of Defense, and is best suited for classroom text. The Flesch Reading Ease formula produces a score between 0 and 100, with a higher score suggesting easier reading (Dubay, 2004). Here comes the formula:

$$\text{RE} = 206.835 - (84.6 \times \text{AWL}) - (1.015 \times \text{ASL})$$

Where:

RE :Reading Ease Score

AWL :Number of Syllable per 100 words (i.e.,the number of words divided by the number of sentences)

ASL :Average number of words per sentence (i.e.,the number of syllables divided by the number of words)

Furthermore, the interpretation result for Flesh Reading Ease Score can be observed as the following table:

Description of Style	Flesh Reading Ease Score	Average Sentence Lengthin Words
Very Easy	90-100	8 or less
Easy	80-90	11
Fairly Easy	70-80	14
Standard	60-70	17
Fairly Difficult	50-60	21
Difficult	30-50	25
Very Difficult	0-30	29 or more

Table2.1.The Interpretation Table for Flesh Reading Ease Score

3. Joe Biden’s Speech towards Ukraine-Russia Conflict

Essentially, speech is the eloquent vocal expression of someone's ideas, emotions, and feelings. It is typically provided verbally and properly prepared in writing. It is associated with public speaking since it vocalizes human ideas, emotions, and feelings in a formal communication event. The objective of delivering the speech is to accomplish the speaker's goal by addressing it in front of the audience. The aim of presenting the speech should not only be to inform the audience about anything, but also to influence their emotions, behaviors, and attitudes (Castillo, 2015).

In the other hand, the confrontation between Ukraine-Russia has become

progressively serious recently. Ukraine has once again been the focus of global attention due to the occupation by the Russian military in the Special Autonomous Region of Crimea (WOK Crimea) (Sergei, 2022). Russia began an attack on February 24, 2022. As a result, Russia has been subjected to a barrage of international sanctions aimed at forcing Moscow to de-escalate the situation. (Tampubolon, 2022).

The war in Ukraine is the result of the government's desire to merge disparate countries. This attraction is inextricably linked to the history of Crimea, which was originally a Soviet Union territory and was given up to Ukraine in 1954 as a gesture of kindness by Kruschev. When the Soviet Union disintegrated into 15 separate republics. Including Crimea, which is undergoing turmoil and where the yearning for independence has reverted to being a "coal of fire" that is currently a source of conflict between Russia and Ukraine (Sergei, 2022).

Undoubtedly, the entire globe nowadays is desperately hoping for the people of Ukraine as they face an unprovoked and unlawful invasion by Russian military forces. Vladimir Putin, as the President of Russia, has chosen a deliberate conflict that will result in massive deaths and human misery. Russia is solely responsible for the death and devastation caused by this attack, and the United States, its allies, and partners will respond in a united and forceful manner. Russia will be made responsible by the rest of the world.

Each day, various elements of Russia's invasion of Ukraine are highlighted. Frequent issues include the United States' engagement in the NATO security

conflict, military and humanitarian support to Ukraine, and the application of sanctions on Russia. A clear perspective on the war's influence on the United States is less prevalent (Supply Chain Brain, 2022).

In response to the Russia's executed, unprovoked, and unjustifiable assault on Ukraine, Joe Biden as President of the United States, where the United States is an ally of Ukraine, is encouraged to pursue the phenomenal speech regarding this conflict. The United States, with allies, and other partners throughout the world have unified in support of Ukraine. People have not forgotten Russia's previous assault and annexation of eastern Ukraine following its illegal invasion of Crimea in 2014. The United States reiterates its strong support for Ukraine's sovereignty and territorial integrity within its internationally recognized boundaries, including its territorial seas. Ukraine is a critical regional strategic partner that has made great steps to modernize its military and strengthen its NATO interoperability. It is still a top priority for security aid to supply Ukraine with the tools it requires to defend itself against Russia's attack on Ukraine (U.S. Department of State, 2023).

B. Relevant Studies

Over the last few decades, numerous earlier investigations have been related to this research. Firstly, To, Fan, and Thomas (2013) have conducted the research entitled *Lexical Density and Readability: A Case Study of English Textbooks*. The objective of this research was to investigate the lexical density and readability of four English textbook texts at the elementary, pre-intermediate, intermediate,

and upper-intermediate levels. Aside from the upper-intermediate level texts, the research found that three of the four reading texts had a high lexical density.

The second relevant study was conducted by Syarif & Putri (2018) entitled *How Lexical Density Reveals Students' Ability in Writing Academic Text*. The research revealed that the analysis of lexical density can show pupils' progress in language learning, particularly in writing. The purpose of this article was to determine the lexical density of students' writing and to explain how lexical density demonstrates their capacity to write an academic work.

Another related study was also investigated by Amelia, Sinar, & Zein, (2020) entitled *Lexical Density and Grammatical Intricacy in Debaters' Speeches*. In this study, the researchers revealed that both the level of lexical density and grammatical complexity in debaters' speeches are substantially larger, indicating that debaters' speeches reflect a lot of information due to the large proportion of running words and that clause complex is more dominating than simple sentence.

The fourth related study was come from Amer & Baarah (2021), entitled *Readability and Lexical Density of Reading Sections of Tenth Grade English Textbooks in Jordan and Sultanate of Oman: A comparative Study*. This research aimed to explore at the readability and lexical richness of the reading portions of English textbooks for the tenth grade in Jordan and the Sultanate of Oman. To examine their readability indexes and lexical density. The findings revealed that Jordanian and Omani English textbooks for 10th grade had the same lexical density and had reading parts with low lexical density, indicating that the reading sections were adequate for 10th grade.

The last relevant study entitled *Analysis on Lexical Density and Readability in Narrative Writings: Basis for English Writing Program* was conducted by Nacua & Eslit (2022). The findings revealed that lexical density and readability had an influence on sentence legibility and preservation when employed in a specific scenario. Teachers may examine students' writing communication more lexically than they do their verbal speech. Regarding this point of view, the research assessed the students' writing skill, lexical density, and readability.

C. Conceptual Framework

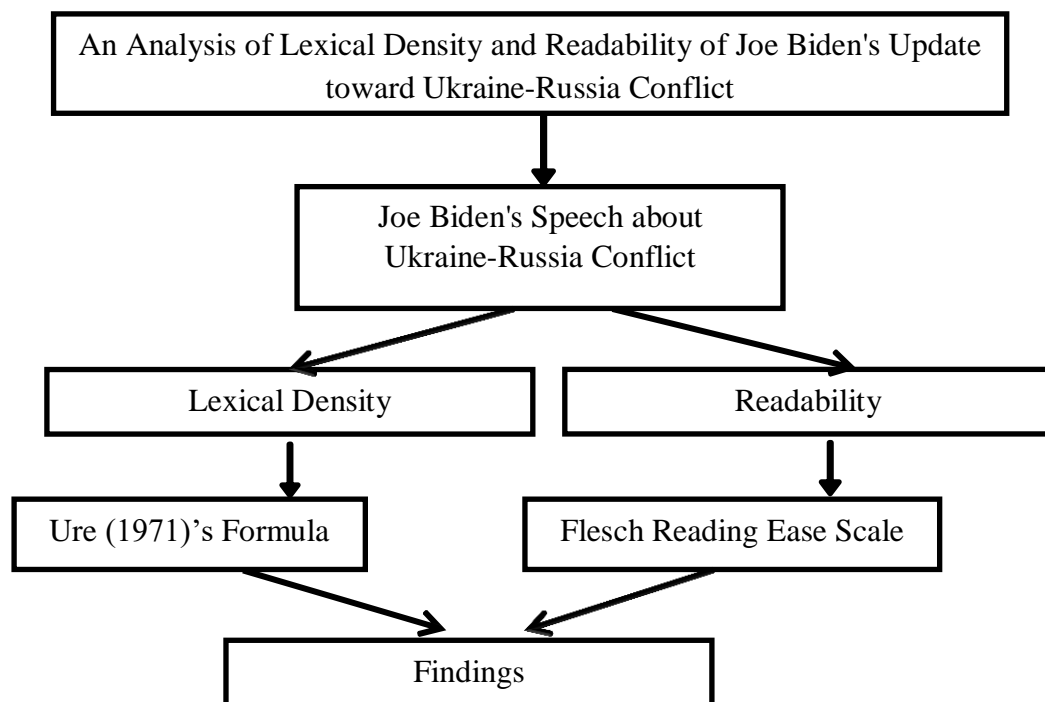

Figure2.1. Conceptual Framework

The above conceptual framework provides a graphic presentation used in research to assist how both causes and consequences tend to be associated.

In this case, after compiling data from Joe Biden's speech about Ukraine-Russia Conflict, the researcher was simplify and condense the data. The researcher then starts to delve further into the results by calculating the speech transcript's lexical density and readability using Ure's (1971) and Flesch Reading Ease formulae. For the outcomes, the measurement of both lexical density and readability of Joe Biden's speech transcript about Ukraine-Russia conflict would described in order to make findings more understandable and accessible.

CHAPTER III

METHOD OF RESEARCH

A. Research Design

Employing an appropriate data analysis approach for an investigation is crucial to conduct a successful qualitative research study (Shava, Hleza, Tlou, & Shonhiwa, 2021). Therefore, in order to investigate the data, content analysis method was applied in this research. Content analysis is the part of qualitative research that examines the content of books, letters, movies, cassettes, diaries, reports, and other materials (Elo, Kääriäinen, Kanste, Pölkki, Utriainen, & Kyngäs, 2014). In order to attain the study objectives and answer the research questions, this method can give precise and complete data.

Through content analysis approach, this study examine the lexical density and readability of Joe Biden's speech on the Ukraine-Russia conflict. First, the researcher was acquire the data from the results of Ure's (1971) and Flesch Reading Ease formulas. Then, the findings should be declared and interpreted into words in order to offer the deeper understanding.

B. Source of Data

The data was obtained from CNBC Television regarding Joe Biden's update on Ukraine-Russia conflict. The data consists of clauses and sentences addressed in the speech transcript entitled *President Biden delivers an update on Ukraine and Russia*, and can be downloaded from CNBC youtube channel as

follows:<https://www.youtube.com/watch?v=XPrq5GjnFcQ&feature=shares>. In this study, only a single video has been thoroughly examined and it was broadcast live on February 23rd, 2022.

C. Technique of Collecting Data

Data collecting in a qualitative study requires extensive time. Any potentially valuable information must be completely, correctly, and methodically recorded by the researcher utilizing field notes, illustrations, and other appropriate tools (Kabir, 2016). In this study, the data was gathered through the range of techniques, including the following:

1. Obtain Joe Biden's speech about Ukraine-Russia conflict from the CNBC's official youtube channel at:
<https://www.youtube.com/watch?v=XPrq5GjnFcQ&feature=shares>
2. Download Joe Biden's speech video and read the transcript.
3. Then, highlight each clause and sentence in the speech transcript.
4. Measure or count the lexical density and readability of the speech transcript by applying Ure's (1971) and Flesch Reading Ease formulas.
5. Describe and interpret the findings for the broader understanding.

D. Technique of Analyzing Data

The vital component to analyze the qualitative study is the interpretations and subjective evaluation of the researcher (Lacey & Luff, 2009). Thus, concerning to the research questions, the researcher was deployed the following analytical procedures as follows: Endeavor to condense the data by gathering, concentrating,

choosing, and simplifying the clauses and sentences in Joe Biden's speech on the conflict between Ukraine and Russia.

1. Deepen the findings by counting the lexical density and readability of the speech transcript by applying Ure's (1971) and Flesch Reading Ease formulas.
2. To further explore the results, the measurement of both lexical density and readability of Joe Biden's speech transcript about Ukraine-Russia conflict was described in order to make findings more understandable and accessible.

CHAPTER IV

FINDINGS AND DISCUSSION

A. Findings

This part presents the important data collected during the research process. It is based on the methodology used by the researcher to gather information and obtain the research results.

1. The Lexical Density on Joe Biden's Speech toward Ukraine-Russia Conflict

There were several procedures taken to examine the lexical density on Joe Biden's Speech toward Ukraine-Russia Conflict. The researcher identified the lexical items that comprised the content words, such as nouns, adjectives, verbs, and adverbs realized on Joe Biden's speech toward Ukraine-Russia conflict, after gathering the data by downloading the speech script from a website. It is consistent with the procedure for calculating lexical density using Ure's formula:

$$\text{Lexical Density} = \frac{\text{Number of lexical words}}{\text{Total number of words}} \times 100\%$$

The data sample of the words that were grouped into the content words is shown below.

Data 1**Sentence 4**

To **put it simply**, **Russia just announced** that it is **carving out** a **big chunk** of **Ukraine last night**.

From data 1, the words *Russia*, *carving*, *chunk*, and *Ukraine* were recognized as nouns. The words *put* and *announced* were recognized as verbs. The words *simply*, *just*, and *out* were recognized as adverbs. While the words *big*, *last*, and *night* were recognized as adjectives. Therefore, it may be inferred from sentence 4 that there are twelve content words in it.

Data 2**Sentence 6**

So today i'm **announcing** the **first tranche** of **sanctions** to **impose cost** on **Russia in response** to their **actions yesterday**.

From data 2, the words *tranche*, *sanctions*, *cost*, *Russia*, *response*, and *actions* were recognized as nouns. The words *announcing* and *impose* were recognized as verbs. The words *so*, *today*, and *yesterday* were recognized as adverbs. While the words *first* was recognized as adjective. It may be inferred from sentence 6 that the data 2 that there are twelve content words in it.

Data 3**Sentence 2**

They **share** in the **corrupt gains** of the **Kremlin policies** and should **share** in the **pain** as **well** because of Russia's **actions**.

From data 3, the words *gains*, *Kremlin*, *policies*, *pain*, and *actions* were recognized as nouns. The words *share* was recognized as verb. The words *well* was recognized as adverb. While the words *corrupt* was recognized as adjective. Therefore, it may be inferred from sentence 2 that there are eight content words in it.

Data 4

Sentence 5

There are still well over 150.000 Russian troops surrounding Ukraine.

From data 4, the words *troops* and *Ukraine* were recognized as nouns. The words *there*, *still*, and *well* were recognized as adverbs. While the words *over*, *Russian*, and *surrounding* were recognized as adjectives. It may be inferred from sentence 5 that the data 4 that there are eight content words in it.

Data 5

Sentence 2

And now political provocation of recognizing sovereign Ukranian territory as so-called independent republics.

From data 5, the words *provocation*, *territory*, and *republics* were recognized as nouns. The words *recognizing* was recognized as verb. The words *now* was recognized as adverb. While the words *political*, *sovereign*, *Ukranian*, *so-called*, and *independent* were recognized as adjectives. Therefore, it may be inferred from sentence 2 that there are ten content words in it.

Data 6

Sentence 1

I'm **going** to **take robust action** to **make sure** the **pain** of our **sanctions** is **targeted** at a **Russian economy**, **not** ours.

From data 6, the words *going*, *action*, *pain*, *sanctions*, and *economy* were recognized as nouns. The words *take*, *make*, and *targeted* were recognized as verbs. The words *not* was recognized as adverb. While the words *robust*, *sure*, and *Russian* were recognized as adjectives. It may be inferred from sentence 1 that the data 6 that there are twelve content words in it.

Data 7

Sentence 3

Nonetheless, **there** is **still time** to **avert** the **worst case scenario** that will **bring untold suffering** to **millions** of **people**.

From data 7, the words *time*, *case*, *scenario*, *suffering*, *millions*, and *people* were recognized as nouns. The words *avert* and *bring* were recognized as verbs. The words *nonetheless*, *there*, and *still* were recognized as adverbs. While the words *worst* and *untold* were recognized as adjectives. Therefore, it may be inferred from sentence 3 that there are thirteen content words in it.

The researcher's next task was to tally the total number of seventh content words after first recognizing the content words. The researcher's total number of findings is shown here.

Table 4.1. The Classification of Content Words of Joe Biden’s Speech toward Ukraine-Russia Conflict

Noun	Adjective	Adverb	Verb
176	68	41	116
Total Sentences:	70	Total Words:	1.182

The table mentioned above reveals that out of the total of 70 sentences, 176 words were identified to be nouns, 68 words were identified to be adjectives, 41 words were identified to be adverbs, and 116 words were identified to be verbs.

Once those first two procedures had been completed successfully, the next step was measured the lexical density using Ure’s method (1971). Ure's formula is as follows to determine lexical density :

$$\text{Lexical Density} = \frac{\text{Number of lexical words}}{\text{Total number of words}} \times 100\%$$

$$\text{Lexical Density} = \frac{401}{1.182} \times 100\% = 33,92\%$$

It can be drawn a conclusion from the measurement of the lexical density of the text that the result of the lexical density was 33,92%. Regarding this measurement, if the number surpasses forty percent, it accounts for higher lexical density, otherwise of reading difficulty. Ure’s study showed that the lexical density for the

spoken texts was under 40% and for the written texts 40% and over. This text had 33,92% lexical density. Based on Ure's study (1971), this spoken text was below forty percent, so it can be drawn a conclusion that Joe Biden's speech toward Ukraine-Russia Conflict is high lexical dense.

2. The Readability on Joe Biden's Speech toward Ukraine-Russia Conflict

The researcher analyzed the data using the content analysis qualitative method. The data analyzed Joe Biden's speech transcript about Ukraine-Russia conflict from CNBC's official YouTube channel. The researcher had completed the following steps. To analyze the second research question, the researcher counted the number of sentences first. From Joe Biden's speech transcript, there were 70 sentences were successfully identified. After that, the researcher counted the number of words. From the 70 sentences that had been identified, there were 1.182 words were successfully identified. The researcher used a manual way to count the words. Then, the researcher counted the number of syllables of the words. Here are the data samples of the syllables.

Data 1

Sentence 7

He's setting up a rationale to take more territory by force.

(he's – sett–ing – up – a – ratio–nale – to – take – more – ter-ri-to-ry – by – force)

From the data 1 sentence seven above, there are 16 syllables were

identified.

Data 2

Sentence 4

We have our next move prepared as well.

(we – have – our – next – move – pre-pared – as – well)

From the data 2 sentence four above, there are 9 syllables were identified.

After calculating the number of syllables, the researcher used the Flesch Reading Ease readability formula to examine the data and establish the grade level. The researcher then discussed the findings and provided an explanation with regard to readability. Calculating the reading text's grades based on the Flesch Reading Ease Readability Formula. The formula was as follows:

$$\text{RE} = 206,835 - (84,6 \times \text{AWL}) - (1,015 \times \text{ASL})$$

Where:

RE :Reading Ease Score

AWL :Number of Syllable per 100 words (i.e.,the number of words divided by the number of sentences)

ASL :Average number of words per sentence (i.e.,the number of syllables divided by the number of words)

In text, the researcher found that there were 70 sentences, 1.182 words, and 2.526 syllables. Those were counted with readability formula of Flesch reading ease,

$$RE = 206,835 - (84,6 \times AWL) - (1,015 \times ASL)$$

$$AWL = \text{Number of syllables} : \text{Number of words}$$

$$= 2.526 : 1.182$$

$$= 2,13$$

$$ASL = \text{Number of words} : \text{Number of sentences}$$

$$= 1.182 : 70$$

$$= 16,88$$

$$RE = 206,835 - (84,6 \times AWL) - (1,015 \times ASL)$$

$$= 206,835 - (84,6 \times 2,13) - (1,015 \times 16,88)$$

$$= 206,835 - (180,198) - (17,1332)$$

$$= 9,503$$

Following the calculation of the reading ease score using the formula provided by Flesch, the analysis moves on to a scale of 1 to 100, with 0 to 30 denoting "very difficult, " 30 to 50 denoting "difficult, " 50 to 60 denoting "fairly difficult, " 60 to 70 denoting "standard, " 70 to 80 denoting "fairly easy, " 80 to 90 denoting "easy," and 90 to 100 denoting "very easy." The description in table 4.3 might be clearer to understand:

Table 4.2. The Interpretation Table for Flesh Reading Ease Score

Description of Style	Flesh Reading Ease Score	Average Sentence Length in Words
Very Easy	90-100	8 or less
Easy	80-90	11
Fairly Easy	70-80	14
Standard	60-70	17
Fairly Difficult	50-60	21
Difficult	30-50	25
Very Difficult	0-30	29 or more

The text's finding result was 9,503, which indicates that the description of style was Very Difficult because it was in the Flesch Reading Ease Score 0-30, after the researcher had already calculated the ASW and ASL of the text.

B. Discussion

The result of this research shows that this text had 33,92% lexical density. Regarding this measurement, if the number surpasses forty percent, it accounts for higher lexical density, otherwise of reading difficulty. Ure's study showed that the lexical density for the spoken texts was under 40% and for the written texts 40% and over. Based on Ure's study (1971), this spoken text was below forty percent, so it can be drawn a conclusion that Joe Biden's speech toward Ukraine-Russia Conflict is high lexical dense. Lexical density is used in speech analysis to categorize lexical

words from the total number of words (Ure, 1971). Words that have lexical value consist of nouns, verbs, adjectives, and some adverbs (Johansson, 2008). The discussion above leads to the conclusion that Joe Biden's speech transcript is a high lexical density text since it contains more lexical than grammatical components.

Readability is concerned with the difficulty of matching a reader to a text. It is an issue of selecting the appropriate reading text for a particular reader. The readability level of a text has an effect on reading fluency. If the text is above the readers' level, they become frustrated and discouraged from reading it (Marzan, 2022). The results of the level of readability in the text of Joe Biden's speech show results the description of style was very difficult because it was in the Flesch Reading Ease Score 0-30, after the researcher had already calculated the ASW and ASL of the text. The readability level of a text must be in accordance with the reading ability of the reader in order to understand the contents of the text.

Based on the data analysis that I have carried out and previous research from Fan and Thomas, it can be concluded that lexical density shows results of a high lexical density. The readability results that I have obtained with the results of previous research from Fan and Thomas show that the description of style was very difficult because it was in the Flesch Reading Ease Score 0-30.

Based on the results of the data analysis that I have carried out, the lexical density shows a high lexical density and the readability results show the description of style was very difficult because it was in the Flesch Reading Ease Score 0-30. Compared with the research results from Amer & Baarah, it shows that the results obtained are low lexical density and the readability results show that the description of style was standard because it was in the Flesch Reading Ease Score 60-70.

BAB V

CONCLUSION AND SUGGESTION

A. Conclusion

Lexical density and readability in phenomenal speech have received little attention. Due to the language employed in Joe Biden's speech on the Ukraine-Russian conflict clearly reveals complicated processes; consequently, assessing the speech's lexical density and readability is essential to establish how readily the speech may be accepted by the recipients. Therefore the researcher conducted an analysis related to Joe Biden's update speech toward the Ukraine-Russia Conflict with the following research results:

The results of the data collection revealed that out of a total of 70 sentences, 1182 words consisted of 176 nouns, 68 adjectives, 41 adverbs, and 116 verbs. Then the results of this study indicate that this text has a lexical density of 33.92%. According to the Ure study, the lexical density for spoken text is below 40%, and for written text, it is 40% or more. In Joe Biden's speech transcription, the researcher found that there are 70 sentences, 1182 words, and 2526 syllables. Those are counted with the readability formula of Flesch reading ease. It can be concluded that the finding result of the text was 9,503, which means the description of style is very difficult because it is in Flesch Reading Ease Score 0-30.

B. Suggestion

It is advised that more researchers carry out a thorough investigation of lexical density and readability in many phenomena to see how the interpersonal meaning construct functions in each phenomenon and what impact it has. Then, it is recommended that English Department students possess comprehension in order to be able to understand any text's message from the standpoint of functional grammar.

Appendix 2

JOE BIDEN'S SPEECH UPDATE TOWARD UKRAINE-RUSSIA CONFLICT

Try and make up your mind. Well, good afternoon. Yesterday Vladimir Putin recognized two regions of Ukraine as independent states, and he bizarrely asserted that these regions are no longer part of Ukraine and their sovereign territory. To put it simply, Russia just announced that it is carving out a big chunk of Ukraine last night. Putin authorized Russian forces to deploy into the region these regions. Today he asserted that these regions actually extend deeper than the two areas he recognized claiming large areas currently under the jurisdiction of the Ukraine government. He's setting up a rationale to take more territory by force. In my view and if we listened to a speech last night, and many of you did, I know he's setting up a rationale to go much further. This is the beginning of a Russian invasion of Ukraine, as he indicated and asked permission to be able to do from his Duma. So let's begin to uh! So I'm going to begin to impose sanctions in response far beyond the steps we and our allies and partners implemented in 2014.

And if Russia goes further with this invasion, we stand prepared to go further as with sanctions who in the Lord's name does Putin think gives him the right to declare new so-called countries. On territory that belong to his neighbors this is a flagrant violation of international law and demands a firm response from the international community. Over the last few months, we've coordinated closely with our NATO allies and partners in Europe and around the world to prepare that response we've settled along. And I've told Putin to his face some month a month more than a month ago, that we would act together and the moment Russia moved against Ukraine. Russia has now undeniably moved against Ukraine by declaring these independent states. So today I'm announcing the first tranche of sanctions to impose cost on Russia in response to their actions yesterday. These have been closely coordinated with our allies

and partners, and will continue to escalate sanctions if Russia escalates. We're implementing full blocking sanctions on two large Russian financial institutions veb and their military bank. We're implementing comprehensive sanctions on Russian sovereign debt, that means we've cut off Russia's government from western financing. It can no longer raise money from the west and cannot trade in its new debt on our markets or European markets.

Either starting tomorrow and continuing in the days ahead will also impose sanctions on Russia's elites and their family members. They share in the corrupt gains of the Kremlin policies and should share in the pain as well because of Russia's actions. We've worked with Germany to ensure nordstream 2 will not as i promised will not move forward as Russia contemplates its next move. We have our next move prepared as well. Russia will pay an even steeper price if it continues its aggression, including additional sanctions. The United States will continue to provide defensive assistance to Ukraine in the meantime and will continue to reinforce and reassure our nato allies. Today in response to Russia's admission that it will not withdraw its forces from Belarus. I have authorized additional movements of U.S forces and equipment already stationed in Europe to strengthen our baltic allies, Estonia, Latvia, and Lithuania. Let me be clear, these are totally defensive moves on our part. We have no intention of fighting Russia.

We want to send an unmistakable message though, that the United States together with our allies will defend every inch of nato territory and abide by the commitments we made into nato. We still believe that Russia is poised to go much further in launching a massive military attack against Ukraine. Hope i'm wrong about that. But Russia has only escalated its threat against the rest of Ukrainian territory including major cities and including the capital city key. There are still well over 150.000 Russian troops surrounding Ukraine. And as i said Russian forces remain positioned in Belarus to attack Ukraine from the north including war planes and offensive missile systems. Russia has moved troops closer to Ukraine's border with Russia. Russia's naval vessels are maneuvering in the black sea to Ukraine south including amphibious assault

ships, missile cruisers, and submarines. Russia's moved supplies of blood, and medical equipment into position on their border you don't need blood unless you plan on starting a war. over the last few days, we've seen much of the playbook that secretary blinken laid out.

Last week in the united nations security council come to pass a major increase in military provocations and false flag events along the line of contact in the Donbas dramatically staged conveniently on-camera meeting of Putin's security council the grand stand for the Russian public. And now political provocation of recognizing sovereign Ukrainian territory as so-called independent republics. In clear violation again of international law, President Putin assault authorization from the Russian parliament to use military force outside of Russian territory. And this set the stage for further pretext of further provocations by Russia to try to justify further military action. None of us should be fooled, none of us will be fooled. There is no justification further Russian assault in Ukraine remains a severe threat in the days ahead. And if Russia proceeds, it is Russia alone that bears the responsibility as we respond. My administration is using every tool at our disposal to protect American businesses and consumers from rising prices at the pump. As I said last week, defending freedom will have cost for us as well. And here at home we need to be honest about that, but as we will do this.

I'm going to take robust action to make sure the pain of our sanctions is targeted at a Russian economy, not ours. We're closely monitoring energy supplies for any disruption. We're executing the plan in coordination with major oil producing consumers and producers toward a collective investment to secure stability and global energy supplies. This will be this will blunt gas prices. I want to limit the pain to the American people are feeling at the gas pump this is critical to me in the last few days. I've been in constant contact with European leaders including with Ukrainian President Zelinski, Vice President Harris met in person with the leaders in Germany over the weekend. Inc at the munich conference including President Zelinski, at every step we have shown the United States and our allies, and partners are working in unison

which he hasn't been counting. On Mr. Putin we're united in our support of Ukraine, we are united in our opposition to Russian aggression, and we're united in our resolve to defend our nato alliance, and we're united in our understanding of the urgency and seriousness of the threat Russia is making to global peace and stability. Yesterday, the world heard clearly the full extent of Vladimir Putin's twisted rewrite of history going back more than a century as he waxed eloquently, noting that... Well i'm not going to go into it, but nothing in Putin's length of remarks indicate any interest in pursuing real dialogue on European security.

In the year 2022, he directly attacked Ukraine's right to exist, he indirectly threatened territorial formerly held by Russia, including nations that today are thriving democracies. And members of nato he explicitly threatened war, unless his extreme demands were met. And there is no question that Russia is the aggressor, so we're clear-eyed about the challenges we're facing. Nonetheless, there is still time to avert the worst case scenario that will bring untold suffering to millions of people. If they move as suggested the United States and our allies and partners remain open to diplomacy, if it is serious when all is said and done. We're going to judge Russia by its actions not its words, and whatever Russia does, next we're ready to respond with unity clarity and conviction. We'll Probably have more to say about this. As it moves on, I'm hoping diplomacy is still available. Thank you all very much.
